

# Qwizard Hackathon 2026 — Solution Brief Template

Jul Episode | Real-Time AI Co-Pilot Challenge

## Overview & Instructions

This Solution Brief is your team's pitch and operational plan. Submit this document at the start of the Hackathon to outline your approach before building. It serves to demonstrate your team's understanding of the problem, your proposed solution architecture, your implementation strategy, and expected success metrics to the judging panel.

## Cover Page

| Field                            | Your Answer                                     |
|----------------------------------|-------------------------------------------------|
| Team Name                        |                                                 |
| Team Tagline / Motto             | <i>Optional</i>                                 |
| Solution Title                   | <i>Capture what your solution does</i>          |
| Team Lead Name<br>(Name & Email) |                                                 |
| Team Members<br>(Name & Email)   | <i>Name, Role, and Location for each member</i> |
| Submission Date                  |                                                 |

| Field   | Your Answer |
|---------|-------------|
| Version | v1.0        |

# Section 1 — Understanding the Problem

*Estimated length: 0.5 pages. Focus on generating deep, voice-driven insights based on the Case Document and Contact Center Journey Guide.*

## 1.1 — The Problem in Your Own Words

In 3 to 5 sentences, synthesize the core issue this challenge aims to solve. Avoid copying from the case document; explain it as you would to someone unfamiliar with contact centers.

[Write your answer here]

## 1.2 — Affected Persona Analysis

Outline how the current unoptimized contact center environment impacts key stakeholders daily.

| Person                | Current Daily Experience | Primary Pain Point |
|-----------------------|--------------------------|--------------------|
| The Customer          |                          |                    |
| The Call Center Agent |                          |                    |
| The Supervisor        |                          |                    |
| The QA Reviewer       |                          |                    |

# Section 2 — Your Solution

*Estimated length: 1 to 1.5 pages. Provide a clear picture of what you are building.*

## **2.1 — Solution Overview**

In 4 to 6 sentences, describe your solution at a high level (what it does, who it helps, how it functions). Keep it clear and accessible for non-technical stakeholders.

[Write your answer here]

## **2.2 — Core Solution Components**

Detail your approach for the two mandatory components below:

### **2.2.1 — Component 1: The Agent Co-Pilot**

Describe specific runtime features, the real-time agent interface, and user experience during a live call.

[Describe Agent Co-Pilot features here]

*Provide a 4 to 8 sentence example scenario (e.g., "When a customer calls about a billing error and their tone starts to rise, our Co-Pilot will..."):*

[Write your scenario here]

### **2.2.2 — Component 2: The Supervisor Dashboard**

Describe the real-time layout, multi-stream metrics, alert logic, and intervention mechanics available to the team leader.

[Describe Supervisor Dashboard features here]

*Provide a 4 to 8 sentence example scenario (e.g., "When three agents simultaneously have frustrated customers, the dashboard will..."):*

[Write your scenario here]

## **Section 3 — The AI Approach**

*Estimated length: 0.5 to 1 page. Demonstrate how your architecture utilizes Agentic AI principles (autonomous reasoning, goal setting, dynamic planning, and real-time adaptation).*

### **3.1 — AI Cognitive Loop & Behavior**

Detail how your system processes inputs, executes logic, interfaces with users, and adapts

dynamically.

| Stage             | Your AI's Behaviour & Logic                                                                    |
|-------------------|------------------------------------------------------------------------------------------------|
| 1. It Observes... | <i>What audio, semantic, database, or contextual signals does the AI monitor in real time?</i> |
| 2. It Decides...  | <i>What dynamic logic or reasoning frames drive its decision-making?</i>                       |
| 3. It Acts...     | <i>What UI changes, prompts, or notifications are pushed to users?</i>                         |
| 4. It Adapts...   | <i>How does the system modify its approach as the conversation evolves?</i>                    |

## 3.2 — Agentic Differentiation

In 3 to 5 sentences, justify why your system qualifies as an adaptive, agentic AI solution rather than a rigid, hardcoded decision tree or a basic scripted chatbot.

[Write your answer here]

## 3.3 — Human-in-the-Loop (HITL) Governance

In 2 to 4 sentences, explain how your solution preserves operational governance, ensuring humans remain the final decision-making authority while the AI functions explicitly as a supportive assistant.

[Write your answer here]

# Section 4 — Technical Architecture

*Estimated length: 0.5 to 1 page. Detail your high-level pipeline architecture.*

## 4.1 — Architecture & Ingestion Design

Provide a structured description or layout of your pipeline. Explicitly specify your components for audio ingestion (e.g., SIP/RTP, WebRTC), orchestration, real-time transcription, database layers, and PII masking layers.

[Detail your technical architecture stack and workflow routing here]

## Section 5 — Business Impact

*Estimated length: 0.5 pages. Detail the operational and financial targets.*

### 5.1 — Expected Business Value & Targets

Quantify how your solution intends to impact key operational contact center metrics (e.g., Average Handle Time reduction, Quality Assurance scaling, First Call Resolution, and accelerated agent ramp-up time).

[Outline your business metrics, projected savings, and ROI expectations here]

## Section 6 — Team Plan & Execution

*Estimated length: 0.25 to 0.5 pages. Outline how you will build and deliver an MVP within the timeline.*

### 6.1 — Team Roles & Responsibilities

| Team Member | Primary Project Role | Key Responsibilities |
|-------------|----------------------|----------------------|
|             |                      |                      |
|             |                      |                      |
|             |                      |                      |

### 6.2 — Sprint & Milestone Build Plan

| Phase                  | Core Deliverables & Focal Point | Target Milestone |
|------------------------|---------------------------------|------------------|
| Phase 1:<br>Foundation |                                 | [Week 1]         |

| Phase                  | Core Deliverables & Focal Point | Target Milestone |
|------------------------|---------------------------------|------------------|
| Phase 2: Core Build    |                                 | [Week 2]         |
| Phase 3: Integration   |                                 | [Week 3]         |
| Phase 4: Polish & Demo |                                 | [Final Days]     |

### 6.3 — Minimum Viable Product (MVP) Scope

In 3 to 5 sentences, outline the core functionality your team guarantees to demonstrate if development timelines face constraints.

[Write your answer here]

### 6.4 — Resource & Support Requirements

Identify any specific support needed from organizers (e.g., sandbox environment variables, API keys, operational domain expert discussions, or criteria clarifications).

[Write your answer here — optional]
